

# B.P. TRUCKING

## Millis, MA

These are the pictures that I took, after testing the new Blue Fuel Technology fuel saving device. I was so pleased and delighted, I just had to offer this testimonial.

Never believing that there was such a device that could save fuel, I volunteered to test this new device on one of my trips to Indiana from Boston. I went to their garage, and had this unit installed, and went on my merry way.

At the completion of the round trip, about 2200 miles later, I calculated the fuel (diesel) that I used, and the miles driven, and believe it or not, I had saved almost 11% in fuel.

Along the way, I noticed that my truck was running smoother and quieter than usual. My truck (pictured above) is a Western Star 2000, 60 series Detroit Diesel, 500 HP. It never before ran so smoothly. I am recommending this product to every truck owner that I know and I am writing this testimonial to see if I can help other truckers to understand how much money they can save using this new product.
