To whom It may concern:

I just wanted to write this brief note to thank you ever so much for convincing me to try your gasoline saving and emission reducing device.

I was absolutely astounded at the results I received.

I have a small landscaping and construction business, and I service some 90 plus customers in five Massachusetts cities. On a recommendation from our parts supplier, we bought and installed your model EPS-8 on six of our rider mowers, and additionally, your EPS-1 on our five pick up trucks. We also bought a new truck at just about the same time, and we installed your larger model EPS-2 on this one.

At first we were really concerned that this was not going to work, but we were sure proved wrong.

Our rider mower savings over the past nine weeks were far beyond our expectations. Even better than that, our 6 year old pick up trucks were operating like they were brand new. The engine seemed to have more

Spunk, and my cost of fuel was reduced by almost 12 percent.

We just bought a new Chevy truck with a 210 hp Caterpillar engine, and we installed your upscale (recommended) unit, and we have saved even more than we did on the pickups. We also noticed that the truck was running much smoother a week or so after we installed the device.

Thank you Blue Fuel. I will not hesitate to tell ANYONE, how pleased we are with your product, and if you want to refer anyone to me, I will be happy to talk to them. What a great surprise this was for me.

Thank you again,
